Diploma in Java Programming

[Genetics Computer School](#)

LIFE PHILOSOPHY

Software Development is much more than creating a pretty application. Good system logic is purpose driven with measurable results. It should inspire, motivate, educate and make history.

GOAL

My goal is to work somewhere where I can be challenged, have fun and develop something lasting. I think most people at their core want to do something that they are passionate about. This, to me, takes precedence over a cushy position.
